

electrical

STEP-BY-STEP SPECIFICATION – 8-WIRE ELECTRICAL SYSTEM

- Step

1

**Determine the location of the source power entering the Panel Run.**

1. At the base of the Panel.

(a) Use CE8FR1 Reversible Floor Power Entry (default to CE8FR1).

(b) Select the Panel to which the Floor Power Entry will be attached.

(c) Select the side of the Panel and the receptacle outlet to which the Floor Power Entry is to be attached.

Note: When using Pass Through Connectors in conditions other than a straight line, you must use a CE8CI-1 I-Connector along with a CE8CP17 Flexible Mesh Jumper Cable through the corner post.
- Step

2

**Determine which Panels are to be powered.**

1. Use CE8PD Power Distribution Housing that corresponds with the width of the Panel.
- Step

3

**Connect power to the powered Panels.**

1. Use CE8CP17 Flexible Mesh Jumper Cable between two adjacent powered Panels.

2. Use CE8CP17 Flexible Mesh Jumper Cable between two adjacent powered Panels separated by a post.

3. Use CE8CP17 Flexible Mesh cable (to turn the post) and a CE8CI-1 "I" Connector to attach the CE8CP Pass Through Cable.

(a) The length of the Pass-Through Cable is calculated by adding together the widths of the non-powered Panels that separate the two powered Panels and applying an additional 16" to the total. (CE8PD Power Distribution Housing is positioned 8" in from the ends of the powered Panel.)

(b) An additional 3" must be added to the Pass-Through Cable for each post that the cable passes through.

(c) Subtract 17" from the total length to find the pass through cable length required.

4. From the price list, select the CE8CP Pass-Through Cable that matches the calculated length. If the length is between listed sizes, use the next size up.
- Step

4

**Determine the location and circuitry of the receptacles.**

1. Each powered Panel has four (4) potential locations for CE8RD Duplex Receptacles – 2 per side. (Exception: 24" wide Panel has only two potential locations – 1 per side.)

2. At each receptacle location there is a choice of four circuit options. Select a circuit option for each location. Circuits one & two are utility circuits; circuits A & B are dedicated circuits.

COMPILE'S 8-WIRE ELECTRICAL SYSTEM

Electrical  
This modification allows for the integration of the commonly required "2+2" configuration (2 utility circuits, 2 dedicated circuits) found in the source power of most of today's North American buildings.

- This system is rated for connection to:**
1. A grounded 120/240V, single phase, 20 A, 60Hz
2. A 120/208V, 3 phase, 20 A, 60Hz branch circuit

EQUIPMENT AMPERAGE

|                                      |              |
|--------------------------------------|--------------|
| Calculator .....                     | 0.25         |
| Electric Eraser .....                | 0.50         |
| Pencil Sharpener.....                | 1.00         |
| Radio .....                          | 0.05         |
| Paper Shredder.....                  | 4.40 - 13.00 |
| Electric Typewriter .....            | 1.20         |
| Personal Computer .....              | 2.00 - 4.00  |
| Video Display Terminal .....         | 0.08         |
| Draft / Letter Quality Printer ..... | 1.20 - 3.00  |
| Laser Printer .....                  | 5.00 - 8.00  |
| Processor / Disk Unit.....           | 1.00 - 10.00 |

**Data/Comm**  
Compile's duplex receptacle openings (1.345 x 2.80) will conform to the ANSI/TIA/EIA Furniture Opening Standard of 1.38 +/- .035 x 2.71 +/- .04

|                        |              |
|------------------------|--------------|
| Desk Top Plotter ..... | 1.50         |
| Fan .....              | 1.00         |
| Heater .....           | 8.50 - 12.50 |
| Coffee Pot.....        | 15.00        |
| Task Light .....       | 1.00         |
| Slide Projector .....  | 2.00 - 6.00  |

Since some equipment, such as large copiers, printers, plotters, heaters and coffee makers would occupy most of the circuit capacity, it is recommended that such devices be supplied with the power directly from the wall or building receptacle.

## Wiring Schematic

## Defining "2 + 2" Wiring Configurations

**2 + 2 Configuration (8 wire, 4 circuit)**

Two Utility Circuits [Compile's new #1 & #2 circuits] share one neutral wire and one ground wire.  
(2 hot [circuit] wires + 1 neutral wire\*\*\* + 1 green ground wire\* = 4 wires)

Two Dedicated Circuits [Compile's new "A" & "B" circuits] share one neutral wire and one ground wire.  
(2 hot [circuit] wires + 1 neutral wire\*\*\* + 1 green/yellow ground wire\*\* = 4 wires)

Note:

It is the ground wire that makes the difference between "Utility" and "Dedicated" circuits. Refer to Wiring Schematics found above.

\* A Green ground wire is a "system" ground. This means it could be grounded to any piece of metal, including the Panel.

\*\* A Green/Yellow ground wire is isolated, within the wiring conduit, all the way back to the box at the source (building ground).

\*\*\* All Neutral Wires are 10 gauge rather than 12 gauge meaning they are larger than normal, allowing greater protection against "noise" or interference on the circuit.

This page provides an exploded view of a sample configuration highlighting each **Electrical** component required when specifying this configuration.

Components

- A. CE8PD36 Power Distribution Housing  
Note: 8 wire, 4 circuits, 2+2 configuration
- B. CE8CP17 Flexible Mesh Jumper Cable (connects two panels side by side or separated by a post)
- C. CE8RD Duplex Receptacle
- D. CE8CI-1 "I" Connector
- E. CE8CP Pass-Through Cable  
Note: Must run in a straight line application only  
Note: Pass-Through Extension Cable (CE8CPF154) available -- extends power capability beyond 208".

E8PD - POWER DISTRIBUTION HOUSING

- Power housing is specified per panel size (e.g. CE8PD36 is for use in a 36" panel).
- 8 wire, 4 circuits (4th circuit dedicated).
- Power distribution housing is required for each powered panel, the power distribution housing should equal the width of the panel that it is specified in.
- Provides two duplex receptacle ports per panel side on all panel widths except the 24" wide panel.
- 24" wide panel allows for only one (1) duplex receptacle on one panel side.
- Each power distribution housing supports 15-20 amps.
- Must specify Raceway Cover with Knockouts on panels, where Power Distribution Housings will be utilized.

|                                                                                   | DESCRIPTION                | PRODUCT CODE | LIST PRICE | DIMENSIONS/INCHES |        |   |

CE8CP17 - FLEXIBLE MESH JUMPER CABLE

- 17" mesh jumper.
- Jumper cable is used to pass through a post or connect two panels together.

|                                                                                    | DESCRIPTION                | PRODUCT CODE | LIST PRICE | DIMENSIONS/INCHES |    |   |

CE8CP - PASS THROUGH CABLE

- Flexible metal conduit is used to distribute electrical power through non-powered panels.
- Metal conduit pass through cables should be in used in a straight runs. Metal conduit pass through cables cannot pass through a post.
- Flexible conduit is required to turn a post. This only comes as 17" w. If panels at the posts do not all have power distribution housings, they must be added even if duplexes are not specified.
- To calculate the length of a Pass-Through Cable, add the widths of the non-powered panels separating the powered panels (panels with distribution housing attached). To this add 16" (distance from the edge of the panel to the distribution housing x 2).
- Add additional 3" when passing through a corner post. See the Tips at the beginning of the section for more details.

| DESCRIPTION                                                                       | PRODUCT CODE       | LIST PRICE | DIMENSIONS/INCHES |         |   |

CE8CP-H - HYBRID PASS THROUGH CABLES WITH WIRE MESH

- Flexible metal conduit with wire mesh distributes electrical power through non powered panels.
- Hybrid Pass through cables with wire mesh allows to connect at 90 degree post at one end.
- To calculate the length of a Pass-Through Cable, add the widths of the non-powered panels separating the powered panels (panels with distribution housing attached). To this, add 16" (distance from the edge of the panel to the distribution housing x 2).
- Add additional 3" when passing through a post. See tips at the beginning of the section for more details.
- Hybrid pass-through cables with wire mesh allows connection at 90 degree post at one end for panels.

| DESCRIPTION                                                                         | PRODUCT CODE              | LIST PRICE   | DIMENSIONS/INCHES |         |    |

CE8RD - DUPLEX RECEPTACLE

- Up to 3 receptacles per circuit
- Up to 6 receptacles per circuit (24 per infeed), not to exceed total of 15 Amps per circuit.
- Duplex Receptacles standard in Black (BLK).
- CE8RD1 = Circuit #1 (utility circuit)
- CE8RD2 = Circuit #2 (utility circuit)
- CE8RDA = Circuit A (dedicated)
- CE8RDB = Circuit B (dedicated)
- CE8RD1 and CE8RD2 (#1 and #2 share common ground)
- CE8RDA and CE8RDB (A and B share common ground)

CE8RDxca - CONTROLLED DUPLEX RECEPTACLE

- Meets California Title 24, Federal and LEED certification guidelines
- Allows circuit to be controlled or switched off when utility is not in use.
- Duplex receptacles are rated for 15 Amps.
- CE8RD1CA = Circuit #1 (utility circuit)
- CE8RD2CA = Circuit #2 (utility circuit)
- CE8RDACA = Circuit A (dedicated)
- CE8RDBCA = Circuit B (dedicated)
- NOTE:
  - CE8RD1CA and CE8RD2CA (#1 and #2 share common ground)
  - CE8RDACA and CE8RDBCA (A and B share common ground)
  - Up to 6 receptacles per circuit (24 per infeed), not to exceed total of 15 Amps per circuit.
  - Available in BLK finish only.
